

Screenshots

The application prompts the user to enter a valid URL. The input is validated to ensure that an empty URL is not accepted before generating the QR code.

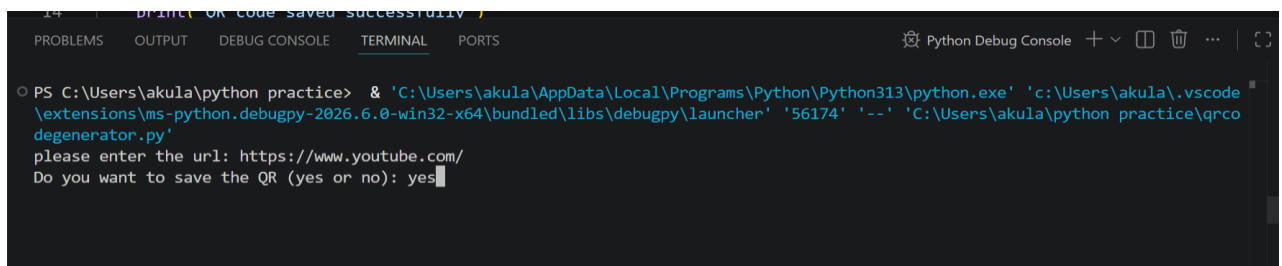

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS Python Debug Console + -
PS C:\Users\akula\python practice> & 'C:\Users\akula\AppData\Local\Programs\Python\Python313\python.exe' 'c:\Users\akula\python practice\qrco
degenerator.py'
please enter the url: https://www.youtube.com/
```

After receiving a valid URL from the user, the application processes the input and generates a unique QR code. The generated QR code is displayed instantly, allowing the user to verify it before deciding whether to save it.

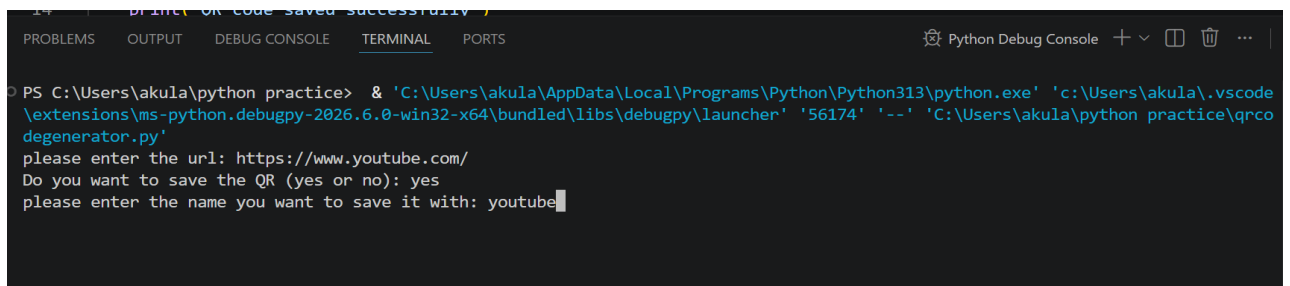

After generating the QR code, the application prompts the user to decide whether to save it. If the user selects **"yes"**, the application proceeds to request a filename before saving the QR code as a PNG image.

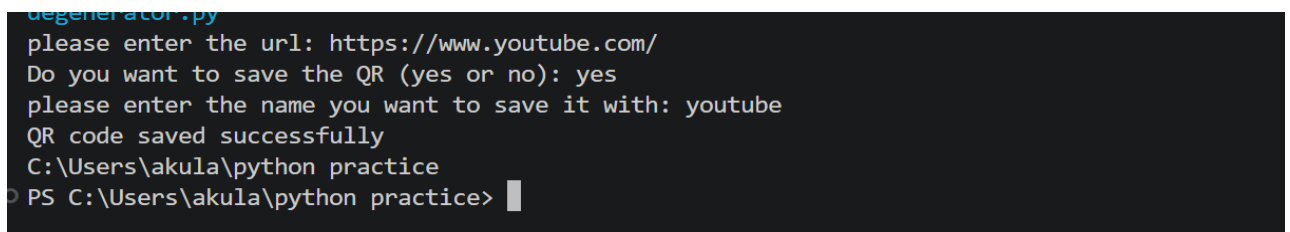

```
14 Print QR code saved successfully
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS Python Debug Console + -
PS C:\Users\akula\python practice> & 'C:\Users\akula\AppData\Local\Programs\Python\Python313\python.exe' 'c:\Users\akula\python practice\qrco
degenerator.py'
please enter the url: https://www.youtube.com/
Do you want to save the QR (yes or no): yes
```

After choosing to save the generated QR code, the application prompts the user to enter a filename. The provided name is used to save the QR code as a **PNG image**, making it easy to identify and access later.

```
14 print('QR code saved successfully')
